Asbestos containing roofing material exists on the 14th floor setback roof that is scheduled for removal during the Scaffolding Erection Operations.

Reason for Amendment:

In order to complete the installation of scaffolding on this setback, it will be necessary to perform the removal of portions of the asbestos roofing to allow for the scaffolding framing to be set in place. Once the scaffolding is in place, it will remain until the deconstruction of the building. For this reason, it cannot be set in place on top of asbestos containing roofing material as all ACM must be removed prior to the commencement of deconstruction activities.

Sections of SEO Work Plan Affected:

The SEO Work Plan has been changed to include the following section:

“6.12 14th Floor Roof ACM Removal

The removal of spots of asbestos roofing on the 14th Floor Setback will be performed in accordance with all requirements of ICR-56 Section 11.6 by the following procedure:

- The spot removal of asbestos roofing will be performed by NYS DOL and NYC DEP certified asbestos handlers utilizing proper PPE.
- PPE for the spot removal of asbestos roofing shall be: disposable coverall suits with hoods, half-face APR equipped with P100 filter cartridges, nitrile gloves, safety goggles, work boots, rubber boot covers, hard hats and hearing protection (only if noise levels exceed OSHA decibel limits).
- The existing remote decontamination unit for SEO activities on the Greenwich Street side of the Building will be used during the spot removal of asbestos roofing.
- The exact quantity and location of the spot removals will be based on the number of frames in the affected area and the locations where framing will be set. The exact locations will be determined by the engineer of record for the scaffolding installation.
- A separation of twenty-five feet (25’) between asbestos and non-asbestos trades will be observed during the spot removal of asbestos roofing.
- NYS DOL and NYC DEP certified asbestos handlers will move the ballast aside exposing the surface of the asbestos roofing at each location where scaffolding will be set.
- The surface of the ACM roofing spots will be wetted down with amended water. NYS DOL and NYC DEP certified asbestos handlers will utilize manual scraping tools to perform the removal. The abated surfaces will be HEPA vacuumed and wet wiped.
• ACM roofing material will be bagged on detachment from the roof surface. Bags will be transported to the decontamination unit via the scaffolding system. All waste generated during the asbestos roofing spot removal will be decontaminated and stored in the existing SEO waste storage facility for disposal as asbestos waste or in accordance with any waste characterization results.
• After the completion of roofing spot removal activities, the Owner’s Environmental Consultant will perform visual inspections of the abated surfaces.
• After the spots have passed OEC visual inspection they will be made water tight by NYS DOL and NYC DEP certified asbestos handlers.
• Once the spots are water tight, scaffolding installation personnel will proceed with the erection on the 14th Floor Setback Roof in accordance with the specifications of the engineer of record for the scaffolding installation.”

**AMENDMENT #10**

**Date Accepted: January 17, 2008**

In Order to execute specific removals requested by the Fire Department of the City of New York, a variance re-opening request (06-0852 re-opening #4) was submitted to the NYS DOL for review, and was approved on January, 14th 2008. The approved variance is attached to this amendment.

**Reason for Amendment:**

The Fire Department of the City of New York has requested the immediate removal of specific items as noted in the attached variance re-opening.

**Sections of the SEO Work Plan Affected:**

The SEO Work Plan has been changed to include *Section 6.11 FDNY Removal Requests* and includes the following language: ‘In accordance with NYS DOL approved variance 06-0852, rubbish on various floors, deemed potentially unsafe in the event of a fire within the building by the FDNY, will be removed and disposed of. The approved variance documents are included in Attachment VIII.’
