Science for Forensics A.A.S.

Forensic scientists are involved in all aspects of criminal cases, and the results of their work may serve either the defense or the prosecution. The forensic scientist’s goal is the evenhanded use of all available information to determine the facts and, subsequently, the truth. By employing principles of biology, chemistry and physics to answer questions in the courtroom, forensic scientists play a pivotal role in today’s criminal justice system. They analyze evidence and provide expert opinions. A forensic scientist may consult with a medical expert about the finding of an investigation.
